

WIIV ERA[®]

EAT OPENMINDED

EAT OPEN MINDED

Plant Based Pioneer

Starting as part of a meat company, Vivera began the development of plant based alternatives for meat more than 30 years ago. What was first a niche market has meanwhile developed into a serious category driven by worries about climate change, animal welfare, and health. Throughout this time Vivera has worked on increasing plant based options in terms of product portfolio using new technologies and R&D insights based on the knowledge of meat structures and taste. Vivera now focuses solely on plant based foods to accelerate development and investments. This has made Vivera one of the leading producers in Europe with a wide range of production capabilities and a broad product portfolio.

Great taste at great value

A lot of consumers see the need to change their eating habits but are reluctant to do so because of taste and price. Therefore, Vivera prioritises creating the best tasting products at affordable prices.

By regularly testing versus competition and meat references, we are constantly understanding what our consumers want

from our products and improving recipes, which has resulted in a lot of award winning products over the years.

Thanks to our huge production scale, we are able to offer high quality, affordable products. This is becoming increasingly important in the face of inflation and rising raw material costs.

The Brand

Vivera delivers products in more than 25 European countries. We want more and more people to enjoy plant based food. And we are succeeding! Increasing numbers of people are taking the step towards plant based. All you have to do is to eat openminded. Vivera wants to challenge everyone to try new things, and encourage them to make a conscious choice without having to compromise on taste. By offering inspiration and delicious food, Vivera helps by making the transition to plant based very easy.
